DFW Cremulator®

Design

In the early 1990s, DFW designed the *Cremulator* $^{\circ}$ to improve working conditions when processing ash remains. And with success! The DFW Europe *Cremulator* $^{\circ}$ is one of the best-selling ash processors in Europe. Since 2000 the unit has also been sold to clients in China.

Benefits

After dividing the larger ferrous and non-ferrous particles, the ash undergoes further processing in the *Cremulator*°. This is where the non-ferrous and ferrous particles are separated into two drawers, where they remain separate from the ash. The Cremulator° grinds the remaining ash to a powder that is automatically deposited into the chosen urn.

The Cremulator has many extra benefits to offer:

- · Lockable non-ferrous drawer;
- Processing time of just 90 seconds;
- Automatic filling of urn or tin provided with a flat base and a maximum height and width of 24cm;
- The funnel size for filling the urn or tin is 50 or 100mm;
- Simple to operate;
- Safe;
- Operators work in a dust-free environment;
- The ash hopper can be adjusted to fit any type of ash container;
- Low maintenance costs.

Proven

Since 1991, hundreds of *Cremulator®* have been supplied and installed. Countries in which our *Cremulator®* has been installed include: the Netherlands, Belgium, Germany, France, Italy, Austria, England, Spain, Ireland and China.
